About SMHcoders

SMHcoders is a UAE-based software solutions company specializing in Artificial Intelligence (AI) and Machine Learning (ML), serving diverse industrial segments. With expertise in predictive analytics, computer vision, chatbot development and AI/ML integrations, we help industries achieve smarter decisions, optimized operations and sustainable growth.

Challenges in the Mining Industry

Equipment downtime and high maintenance costs for haul trucks, conveyors, drills

- Safety challenges in underground and remote operations
- Environmental impact (dust, water use, emissions) under ESG scrutiny
- High energy consumption in ore processing and ventilation
- Complex operations with scattered data from multiple sites

Predictive
Maintenance for
Mining
Equipment

Autonomous Conveyor Monitoring and Control System

Ventilation on Demand (VoD) Using IoT Sensors

Environmental Monitoring and Compliance Automation

Worker Safety and Real-Time Location Tracking

AI-Optimized Fleet Management System

Energy
Optimization for
Pumps,
Compressors,
and Mills

Slope and Ground Stability Monitoring

Smart Inventory and Spare Parts Management

Automated Dust and Air Quality Control

Digital Twin for Mine-Wide Operational Planning

Circular Water Management System

Key Benefits

- Less unplanned downtime
- Longer equipment life
- Lower maintenance costs

- Prevents major failures
- Increases belt uptime and throughput
- Reduces manual inspections

- Improves worker safety
- Optimizes underground energy use
- Extends ventilation asset life

- Ensures compliance
- Lowers risk of fines or reputational harm
- Improves ESG reporting

- Improves safety and accountability
- Speeds emergency response
- Automates incident documentation

- Better fuel economy and cycle time
- Higher fleet utilization
- Less idle time and emissions

- Lowers energy use and costs
- Reduces equipment wear
- Supports sustainability with less CO₂

- Prevents landslides and collapses
- Protects lives and infrastructure
- Enables riskbased interventions

- Prevents downtime from stockouts
- Lowers carrying costs
- Improves procurement efficiency

- Protects worker health
- Ensures air quality compliance
- Reduces community impact

- Increases visibility
- Improves planning and risk assessment
- Supports continuous improvement

- Cuts external water use
- Enhances sustainability and compliance
- Supports circular economy, zero discharge
